IPA International Petroleum Abstracts

AIMS AND SCOPE *International Petroleum Abstracts* covers petroleum and allied literature concerning oilfield exploration and development, petroleum refining and products, and economics. The scientific and technical topics include geology, geophysics, drilling, production, transport and storage, refinery processes, analysis and testing, gas, oil, bitumen, corrosion, safety, pollution, education and training. The coverage is extensive, including irregular publications and topics in sources not specifically petroleum oriented.

Each volume lists the international spread of periodicals regularly abstracted and a subject index together with a sectionalized contents afford ready access to all of the topics.

International Petroleum Abstracts provides an in-depth service using informative and indicative abstracts, while at the same time building up as a comprehensive survey of developments in petroleum and related topics.
